

## Logistics & Automation Madrid 2024

# Smartlog presents its vision for the future of logistics at IFEMA Madrid

- Under the slogan "Reimagining your internal logistics: Uniting Technologies to be your solution"
- We will showcase the latest innovations in mobile robotics, storage systems, and intelligent software

*Urretxu, November 27, 2024*

Smartlog's innovative offering for transforming intralogistics will take center stage this week at Logistics & Automation, the industry's premier trade fair taking place on November 27th and 28th at IFEMA Madrid. Under the slogan "Reimagining Your Internal Logistics: Uniting Technologies to Be Your Solution," Smartlog will present the latest innovations in mobile robotics, storage systems, and intelligent software, designed to optimize operations, reduce costs, improve efficiency, and contribute to sustainability.

### **Reimagining your internal logistics Uniting technologies to be your solution**

This slogan reflects our innovative vision and strategy. At Smartlog, we firmly believe in the transformative power of advanced technologies to make internal logistics more efficient, flexible, and adaptable to market changes. Our goal is to help companies envision how they can significantly improve their logistics processes through automation and the use of intelligent solutions, optimizing their operations without the need for large investments.

"Uniting technologies to be your solution" encapsulates our philosophy of combining diverse technologies such as **mobile robotics, automated storage, intelligent sorting systems, and AI-based analytics** to solve complex logistical challenges. Success does not lie in a single isolated solution, but in the personalized integration of multiple technologies, transforming internal logistics into a comprehensive, flexible, and future-ready system.

Our solutions are the result of a detailed analysis of the data and specific needs of each client, with a future-oriented global vision. This is possible thanks to our constant technological vigilance and the agreements established with the best partners internationally, allowing us to meet the changing needs of the market.

**The technological heart of Smartlog lies in its software and data exploitation technology, acting as the brain of the supply chain.** We combine mobile robotics, IIoT, Big Data, Artificial Intelligence, and Machine Learning to generate models that propose improvements, schedule maintenance, adapt behaviors in real-time, and predict future scenarios.

Among the technological innovations that will be presented at stand 7B28 in Hall 7, the following stand out:

**AutoStore:** The world's leading robotic system in density and efficiency per square meter. Optimize storage by up to 400%, with 99.7% availability and minimal energy consumption.

**Smartsorter:** A highly accurate and modular robotic sorting solution, capable of managing large order volumes in record time, ideal for e-commerce and reverse logistics. Handles up to 30,000 items per hour with 99.9% accuracy.

**Smartpallet:** A revolutionary multidirectional storage and retrieval system for pallets, maximizing density and minimizing operating costs. Multidirectional storage improves density by up to 55%.

**Vertical storage systems:** Solutions that take advantage of warehouse height, improving accessibility, reducing errors, and optimizing space utilization.

### **Galys, Smartlog's logistics software suite**

The Galys Suite is designed to transform the way companies manage their logistics operations and supply chains. This comprehensive asset management tool enables remote interconnection and monitoring, providing flexibility and scalability through a collaborative platform. Galys stands out for its ability to integrate into the company's operations, uniting all assets and systems. This advanced logistics software integrates artificial intelligence, IoT, and machine learning to manage logistics operations in real time, anticipates needs, and offer predictive analytics.

### **Innovation and sustainability as strategic axes**

Since its founding 8 years ago, Smartlog has led the digital transformation of warehouses and logistics centers in more than 15 countries and 40 sectors. With a presence in Europe, Latin America, the United Arab Emirates, Egypt, and Saudi Arabia, our global expansion reflects our commitment to bringing cutting-edge logistics solutions to every corner of the world, adapting to the specific needs of each market. In 2024, it has landed in Mexico, with plans to reach the United States in 2025.

Beyond technology, Smartlog focuses on human well-being and sustainability. Automation not only improves processes but also creates safer and more ergonomic work environments.

An example of this vision for the future is the Nest project, the Group's Innovation and Talent Center, whose purpose is to bring the concept of Logistics 5.0 to its clients and collaborators. Nest is conceived as an experimentation environment where companies can develop customized use cases using their own products, becoming a creative space where Smartlog stands out as a benchmark in the implementation of cutting-edge technological solutions.

### **A strategic partner for the future of logistics**

With over 40 AutoStore installations in different countries and the title of **the largest integrator in Spain**, it has implemented the first AutoStore system in Uruguay, Panama, the Dominican Republic, and Puerto Rico. This technology has been applied in sectors as diverse as retail, agricultural machinery, cosmetics, spare parts, fashion, and pharmaceutical distribution, as well

as specialized sectors such as vaccine laboratories. Smartlog drives intelligent and sustainable logistics and talent.

With a team of more than 170 professionals and ten companies that make up the group, and exponential growth during its eight years of activity, Smartlog goes beyond technological integration. Our participation in Logistics & Automation Madrid 2024 underscores our ability to offer cutting-edge technological solutions and our philosophy of close collaboration with clients, providing personalized solutions that guarantee long-term success.

We invite you to discover how Smartlog can transform your internal logistics. Come to stand 7B28 in Hall 7 and take the first step towards the future of intralogistics.
